

MCM68A30A MCM68B30A

1024 X 8-BIT READ ONLY MEMORY

The MCM68A30A/MCM68B30A are mask-programmable byteorganized memories designed for use in bus-organized systems. They are fabricated with N-channel silicon-gate technology. For ease of use, the device operates from a single power supply, has compatibility with TTL and DTL, and needs no clocks or refreshing because of static operation.

The memory is compatible with the M6800 Microcomputer Family, providing read only storage in byte increments. Memory expansion is provided through multiple Chip Select inputs. The active level of the Chip Select inputs and the memory content are defined by the customer.

- Organized as 1024 Bytes of 8 Bits
- Static Operation
- Three-State Data Output
- Four Chip Select Inputs (Programmable)
- Single ± 10% 5-Volt Power Supply
- TTL Compatible
- Maximum Access Time = 350 ns MCM68A30A
 250 ns MCM68B30A

ABSOLUTE MAXIMUM RATINGS (See Note 1)

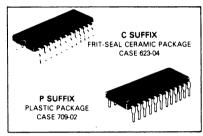

Rating	Symbol	Value	Unit	
Supply Voltage	Vcc	-0.3 to +7.0	Vdc	
Input Voltage	V _{in}	-0.3 to +70	Vdc	
Operating Temperature Range	ТД	0 to +70	°C	
Storage Temperature Range	T _{stg}	-65 to +150	°c	

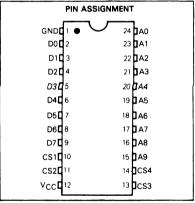

NOTE 1. Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded. Functional operation should be restricted to RECOMMENDED OPERAT ING CONDITIONS. Exposure to higher than recommended voltages for extended periods of time could affect device reliability.

DC OPERATING CONDITIONS AND CHARACTERISTICS

(Full operating voltage and temperature range unless otherwise noted.)

RECOMMENDED DC OPERATING CONDITIONS

Parameter		Min	Nom	Max	Unit
Supply Voltage	Vcc	4.5	5.0	5.5	Vdc
Input High Voltage	VIH	2.0	_	5.5	Vdc
Input Low Voltage	VIL	-0.3	-	0.8	Vdc

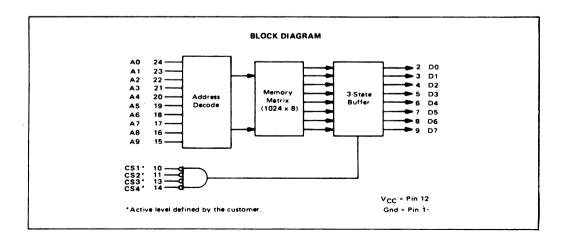

DC CHARACTERISTICS

Characteristic	Symbol	Min	Тур	Max	Unit
Input Current (V _{in} = 0 to 5.5 V)	l _{in}	_		2.5	μAdc
Output High Voltage (I _{OH} = -205µA)	· Voн	2.4	-	-	Vdc
Output Low Voltage (I _{OL} = 1.6 mA)	Vol	·	-	0.4	Vdc
Output Leakage Current (Three State) (CS = 0.8 V or $\overline{\text{CS}}$ = 2.0 V, V _{Out} = 0.4 V to 2.4 V)	lo		-	10	μAdc
Supply Current (V _{CC} = 5.5 V, T _A = 0 ^o C)	'cc		-	130	mAdc

CAPACITANCE (f = 1.0 MHz, T_A = 25°C, periodically sampled rather than 100% tested.)

Characteristic	Symbol	Max	Unit
Input Capacitance	C _{in}	7.5	pF
Output Capacitance	Cout	12.5	pF

This device contains circuitry to protect the inputs against damage due to high static voltages or electric fields; however, it is advised that normal precautions be taken to avoid application of any voltage higher than maximum rated voltages to this high-impedance circuit.

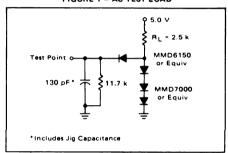

AC OPERATING CONDITIONS AND CHARACTERISTICS

(Full operating voltage and temperature unless otherwise noted.)

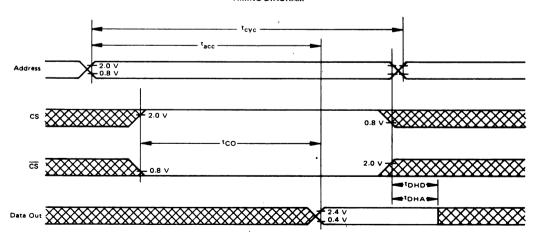

(All timing with $t_r = t_f = 20$ ns, Load of Figure 1)

CUSTOM PROGRAMMING

By the programming of a single photomask for the MCM68A30A/MCM68B30A, the customer may specify the content of the memory and the method of enabling the outputs.

Information on the general options of the MCM68A30A/MCM68B30A should be submitted on an Organizational Data form such as that shown in Figure 3. ("No Connect" must always be the highest order Chip Select pin(s).)

Information for custom memory content may be sent to Motorola in one of four forms (shown in order of preference):

- 1. Paper tape output of the Motorola M6800 Software.
- 2. Hexadecimal coding using IBM Punch Cards.
- 3. EPROM (MCM2708, MCM27A08, or MCM68708).
- 4. Hand-punched paper tape (Figure 3).

PAPER TAPE

Included in the software packages developed for the M6800 Microcomputer Family is the ability to produce a paper tape output for computerized mask generation. The assembler directives are used to control allocation of memory, to assign values for stored data, and for controlling the assembly process. The paper tape must specify the full 1024 bytes.

FIGURE 2 - BINARY TO HEXADECIMAL CONVERSION

		Hexadecimal Character			
0		0	0	0	0
0		0	0	1	1
0		0	1	0	2
0		0	1	1	3
0		1	0	0	4
0		1	0	1	5
0		1	1	0	6
0		1	1	1	7
1		0	0	0	8
1		0	0	1	9
1		0	1	0	Α
1		0	1	1	В
1		1	0	0	С
1		1	0	1	D
1		1	1	0	E
1		1	1	1	F

IBM PUNCH CARDS

The hexadecimal equivalent (from Figure 2) may be placed on 80 column IBM punch cards as follows: Step Column

Olop	00.0	
1	12	Byte "0" Hexadecimal equivalent for outputs D7 thru D4 (D7 = M.S.B.)
2	13	Byte "0" Hexadecimal equivalent for outputs D3 thru D0 (D3 = M.S.B.)
3	14-75	Alternate steps 1 and 2 for consecutive bytes.
4	77-80	Card number (starting 0001)
